Dear Sir:

In response to the Office Action dated September 18, 2002, the time for responding to which is extended three months to March 18, 2003, please amend the above-referenced application as follows:

IN THE ABSTRACT:

Please replace the Abstract of the Invention with the following text:

"Abstract of the Invention

A reflection type color liquid crystal display (LCD) device is disclosed that achieves achromatization in black and white as well intermediate scale display. The LCD device includes an active matrix substrate provided with a plurality of pixels each having a switching element and a reflection electrode in a matrix configuration, a liquid crystal layer between the substrate and a glass substrate, a phase plate and a polarization plate. The parameters of the above elements are designed such that projections of Stokes parameter (S_1 , S_2 , S_3) of light between the phase plate and the liquid crystal layer on an S_1 - S_2 plane constitute a substantially linear line, and that at a reflecting plane of the reflection electrode, the polarization of the light is substantially circularly polarized for a normally black display and
